

# Protect your roof from Grease!!

Kitchen exhaust systems sit above grease-producing kitchen equipment, such as ovens, ranges, smokers and deep fryers. Grease accumulates and can drain onto your rooftop. The steel catch-boxes that collect this grease are vulnerable to the elements, and the overflow of grease causes damage to roofing systems. The result? Unnecessary liabilities, costly roof repairs, unsafe work areas, fire hazards and possible code violations.

*Rain Water Overflow*

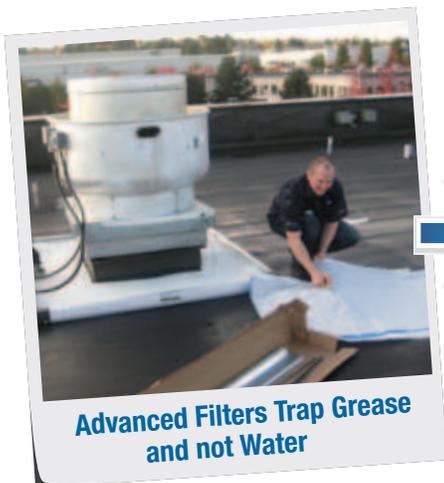

*Grease Overflow onto Roof*

*Older Equipment Leaking onto Roof*

## The Grease Guard System

Designed to fit all types of kitchen exhaust fans with low to moderate grease output. With the Grease Guard's ability to repel rainwater and absorb grease in its patented Advance Filter Composite, it is the most absorbent, noncombustible, rainproof, structurally-sound system on the market today.

# With our Grease Containment System you can prevent the following:

## 1. Costly Roof Repairs

Grease and oil are detrimental to almost any roof membrane system's performance. Most roofing systems typically turn soft and spongy following prolonged exposure to animal fats and cooking oil (the most likely discharges from kitchen exhaust fans) causing seams to rupture, which leads to roof failure and leaks.

*Underside of roof exposed. Roof failure (leaks) due to grease on torch on the roof system.*

## 2. Severe Fire Hazards

In North America over 11,000 structure fires are reported annually in eating and drinking establishments. Over 90% are due in part to kitchen exhaust grease and oil.

**Help Prevent Roof Damage**

## 3. Environmental Concerns

Rainwater carries the pollutants that are discharged by your rooftop exhaust fans through your drains and to the stormwater systems, contaminating the water supply.

**Grease and Water on Roof**

**Overflow Caused by Rain Water**

## 4. WCB Violations

Grease spills create fire hazards and unsafe working conditions. Poor conditions and standards can lead to WCB claims increasing.

### **Safeguard Your Roofing Investment**

*This product line continues to work successfully for tens of thousands of restaurants, universities, food processing plants and industrial manufacturers worldwide. The G2 Grease Guard Roof Defense Systems are so effective at containing grease and oils from rooftop exhaust systems that Underwriters Laboratories Inc. has listed it for effectiveness and safety. This is the most oil absorbent, rainproof, noncombustible, grease containment system on the market today.*
